KAMESH KOTWANI

LinkedIn | +447932851567 | Portfolio | kameshkotwani@gmail.com | GitHub | Medium

Summary

A Data Scientist with 2+ years of experience in machine learning with 85% accuracy for language models, automating 40% tasks with 30% operational efficiency, and leading end-to-end processes for stakeholders. Proven track record in boosting customer retention, accelerating decision-making by 25%, and contributing to revenue growth. Proficient in Python, SQL, Scala, and a suite of data science tools, specializing in machine learning, deep learning and MLOps.

Experience

IQVIA | Big Data Engineer | *Bangalore, India* *June 2022 - August 2023*

- Collaborated in a 10+ member team, optimizing Spark and Airflow pipelines, reducing modelling and run time by 30%.
- Led end-to-end data processes for 20+ pharmaceutical stakeholders, boosting customer retention by 12% and decision-making by 20%.
- Enhanced efficiency in team workflow and automated redundant tasks using bash and python which increased 25% operational boost.
- Developed on Apache Spark to optimize and decrease data processing pipeline runtime from 10-12 hours to 6-7 hours for intensive containing terabytes of data.
- Programmed Airflow pipelines for cluster cleanup automation, which helped to get out of limited space deadlock using Airflow. It shortened the low space error debugging issue by 90% and highly appreciated by the team.

CDAC | NLP/ML Project Engineer | *Pune, India* October 2021 - *June 2022*

- Facilitated the Kanthasth project by CDAC, involving the development of an AI chatbot using JavaScript (https://kanthasth-rajbhasha.gov.in/) which lessen the query from users by 35%.
- Collaborated with 5+ member team to create an NLP dashboard and text analytics dashboard for research purposes which reduced analytics time by 50%.
- Created Language Translation Models across various languages with accuracy of 85% using Transformers.
- Crafted various automation scripts with bash and python to increase team workflow which ceased manual task by 80%.
- Engineered and implemented frontend user interfaces for NLP initiatives using Django and Flask, enhancing user accessibility, leading to a 25% increase in user retention rates and a 20% boost in user satisfaction scores.

Skills

Python, SQL, R, Scala, Oracle Apex, MySQL, Postgres, NoSQL, Power BI, Tableau, Matplotlib, Seaborn, Plotly, Pandas, NumPy, SciPy, Scikit-learn, Streamlit, Tensorflow, Pytorch, Docker, Keras, Flask, Machine Learning, Deep Learning, NLP, MLflow, DVC (Data Version Control), Git, AWS, Azure, GCP, Hadoop, Airflow, Elasticsearch, Predictive Modelling, Regression Analysis, XGBoost, Statistics, Probability Theory, Calculus, SpaCy, NLTK, LSTM, LLMs, Transformers, Generative AI

Education

Masters in Data Science | University of Sheffield | *Sheffield, United Kingdom* September 2023 – September 2024

PG Diploma- Big Data Analytics | CDAC | *Pune, India* May 2021 – October 2021

Projects

Movie Recommender System **GitHub Link**

- Created a movie recommender system using collaborative filtering process which recommends similar movies using cosine similarity distance among five thousand movies.
- Pioneered data wrangling techniques, mitigating imbalances via synthetic data augmentation and leveraging data mining for insightful Exploratory Data Analysis. Used streamlit for deployment in the cloud.

WhatsApp Chat Analyzer **Github Link**

- Collected WhatsApp chat data to create an analyser for NLP.
- It is deployed in cloud using streamlit, it analyses chats and tells the most active time of user and a frequently used words using word cloud and spacy.

Book Recommender System **Github Link**

- Developed a book recommender system using content filtering which recommends similar books and shows top 48 books.
- Indulged in Data Cleaning, Data Analysis, kNN Imputation for missing values, Feature Engineering and Feature Scaling to increase models' performance and accuracy.

Leaf Disease Detection using Deep Learning CNN

- This is the university research project which using CNN architecture to detect if the leaf has a certain disease or not with 78% accuracy.
- Many CNN architectures used to create and test models such as AlexNet, ResNet, ImageNet. Optimizers such as Adam, Adagrad also used to make training faster.
